RefugeCare

RefugeCare is your trusted companion in times of natural calamities, designed to help you prepare for, navigate through, and recover from unexpected disasters. Whether it's a hurricane, earthquake, wildfire, or any other crisis, RefugeCare ensures that you and your loved ones are safe and connected when it matters most.

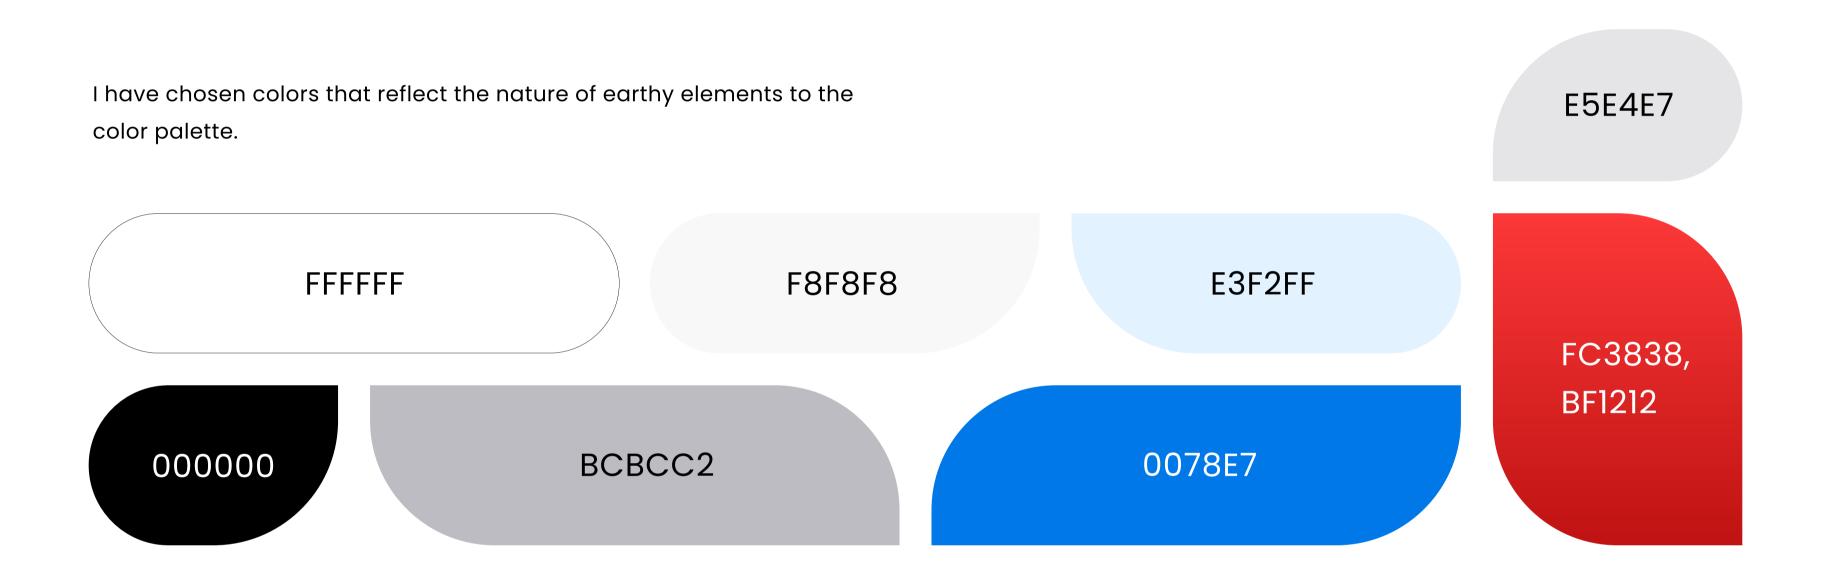

Typography

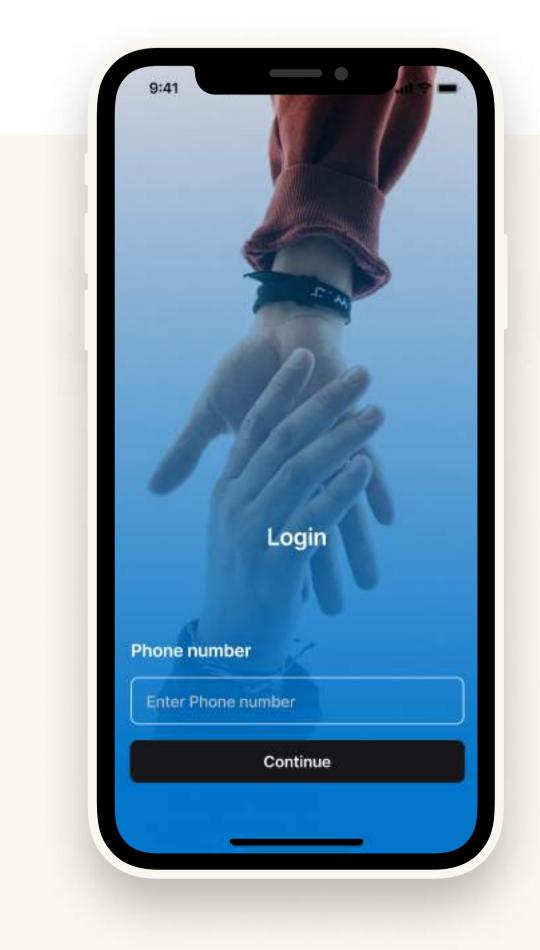

I have chosen rounded sans serif font which gives a modern perspective to the interface.

Color

Onboarding

The app begins with a simple splash screen, followed by a simple login flow using phone number, asking for language preference and access to your location

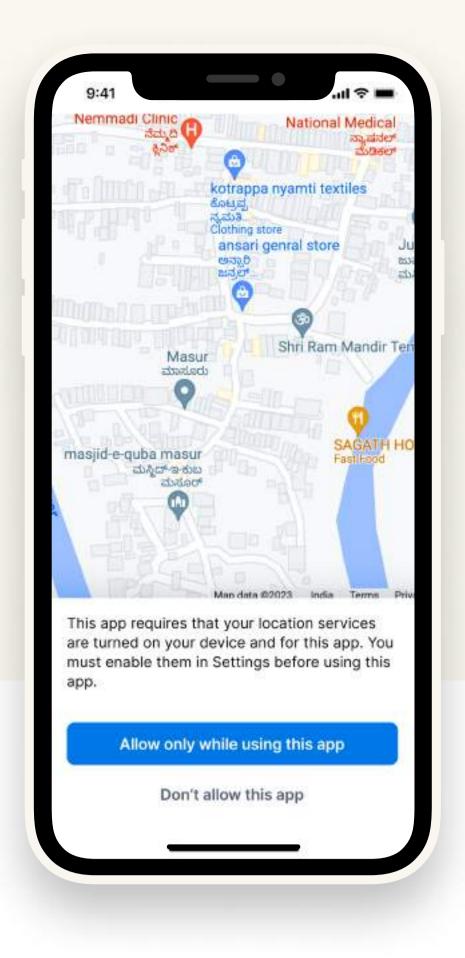

Login

Once a user opens our app, they are asked to login using their phone number, there is no other option available as we need to store user's phone number into our database, so that we can help them at the time of need

Language Preference

Language preference is one of the important part of onboarding as not every user can read and write in english, so our app allows user to read and write in their regional language

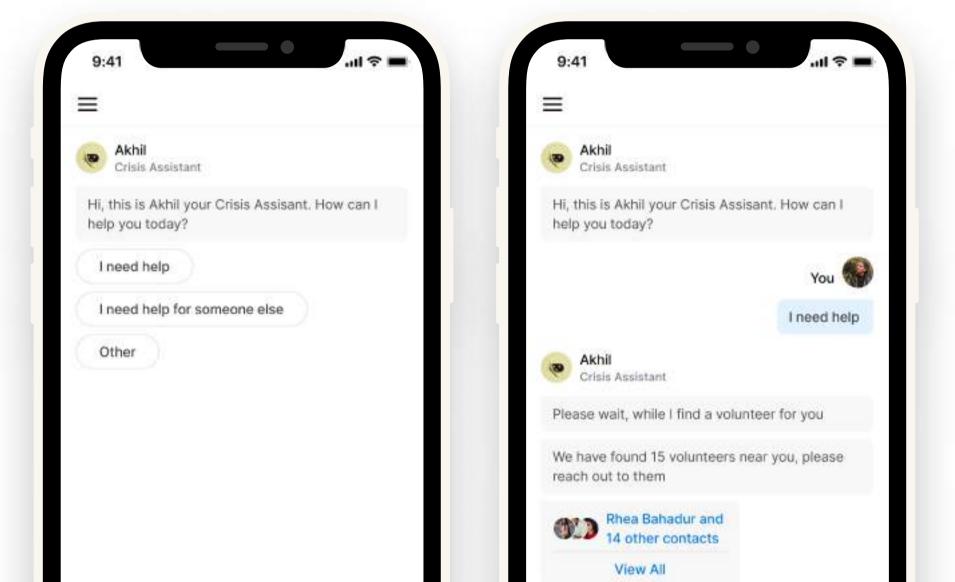

Allow Location

This is again an important step so that users can be reached out easily at the time of need

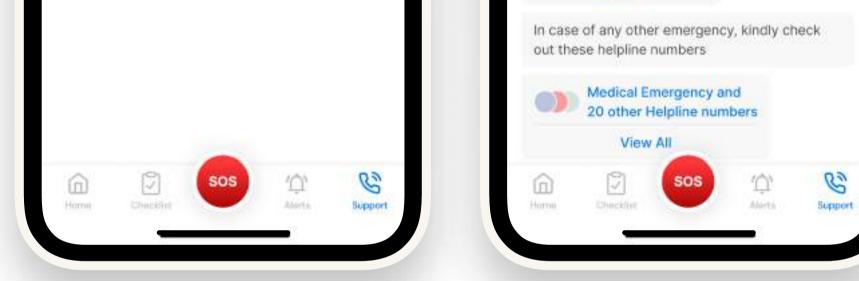

Structure & Overview

The app has 5 main features which allows user under natural calamities- it prepares a checklist according to the calamity, gives time to time alert, has an in-built crisis assitant and lastly has all emergency numbers save under SOS

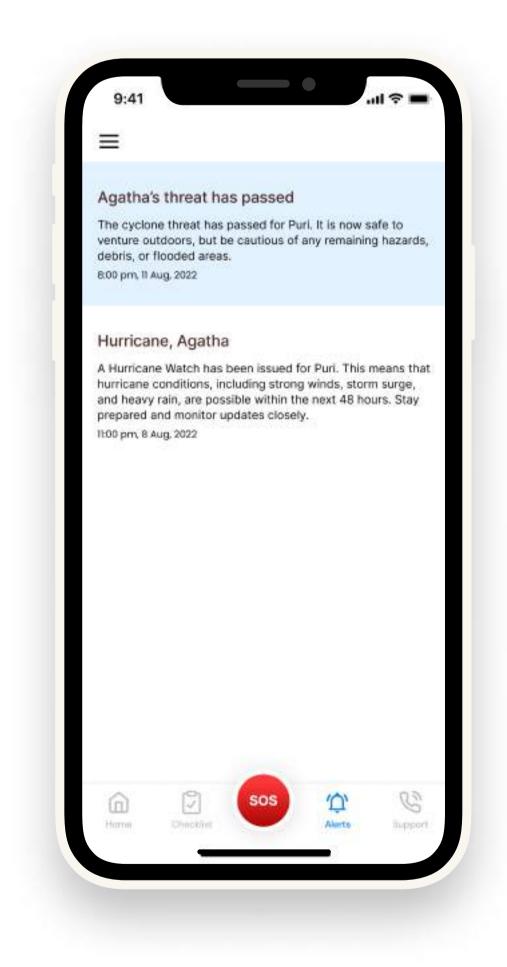

Support

The support feature allows the user to chat with crisis assistant where they can seek for help and the assistant will connect the users with available volunteers

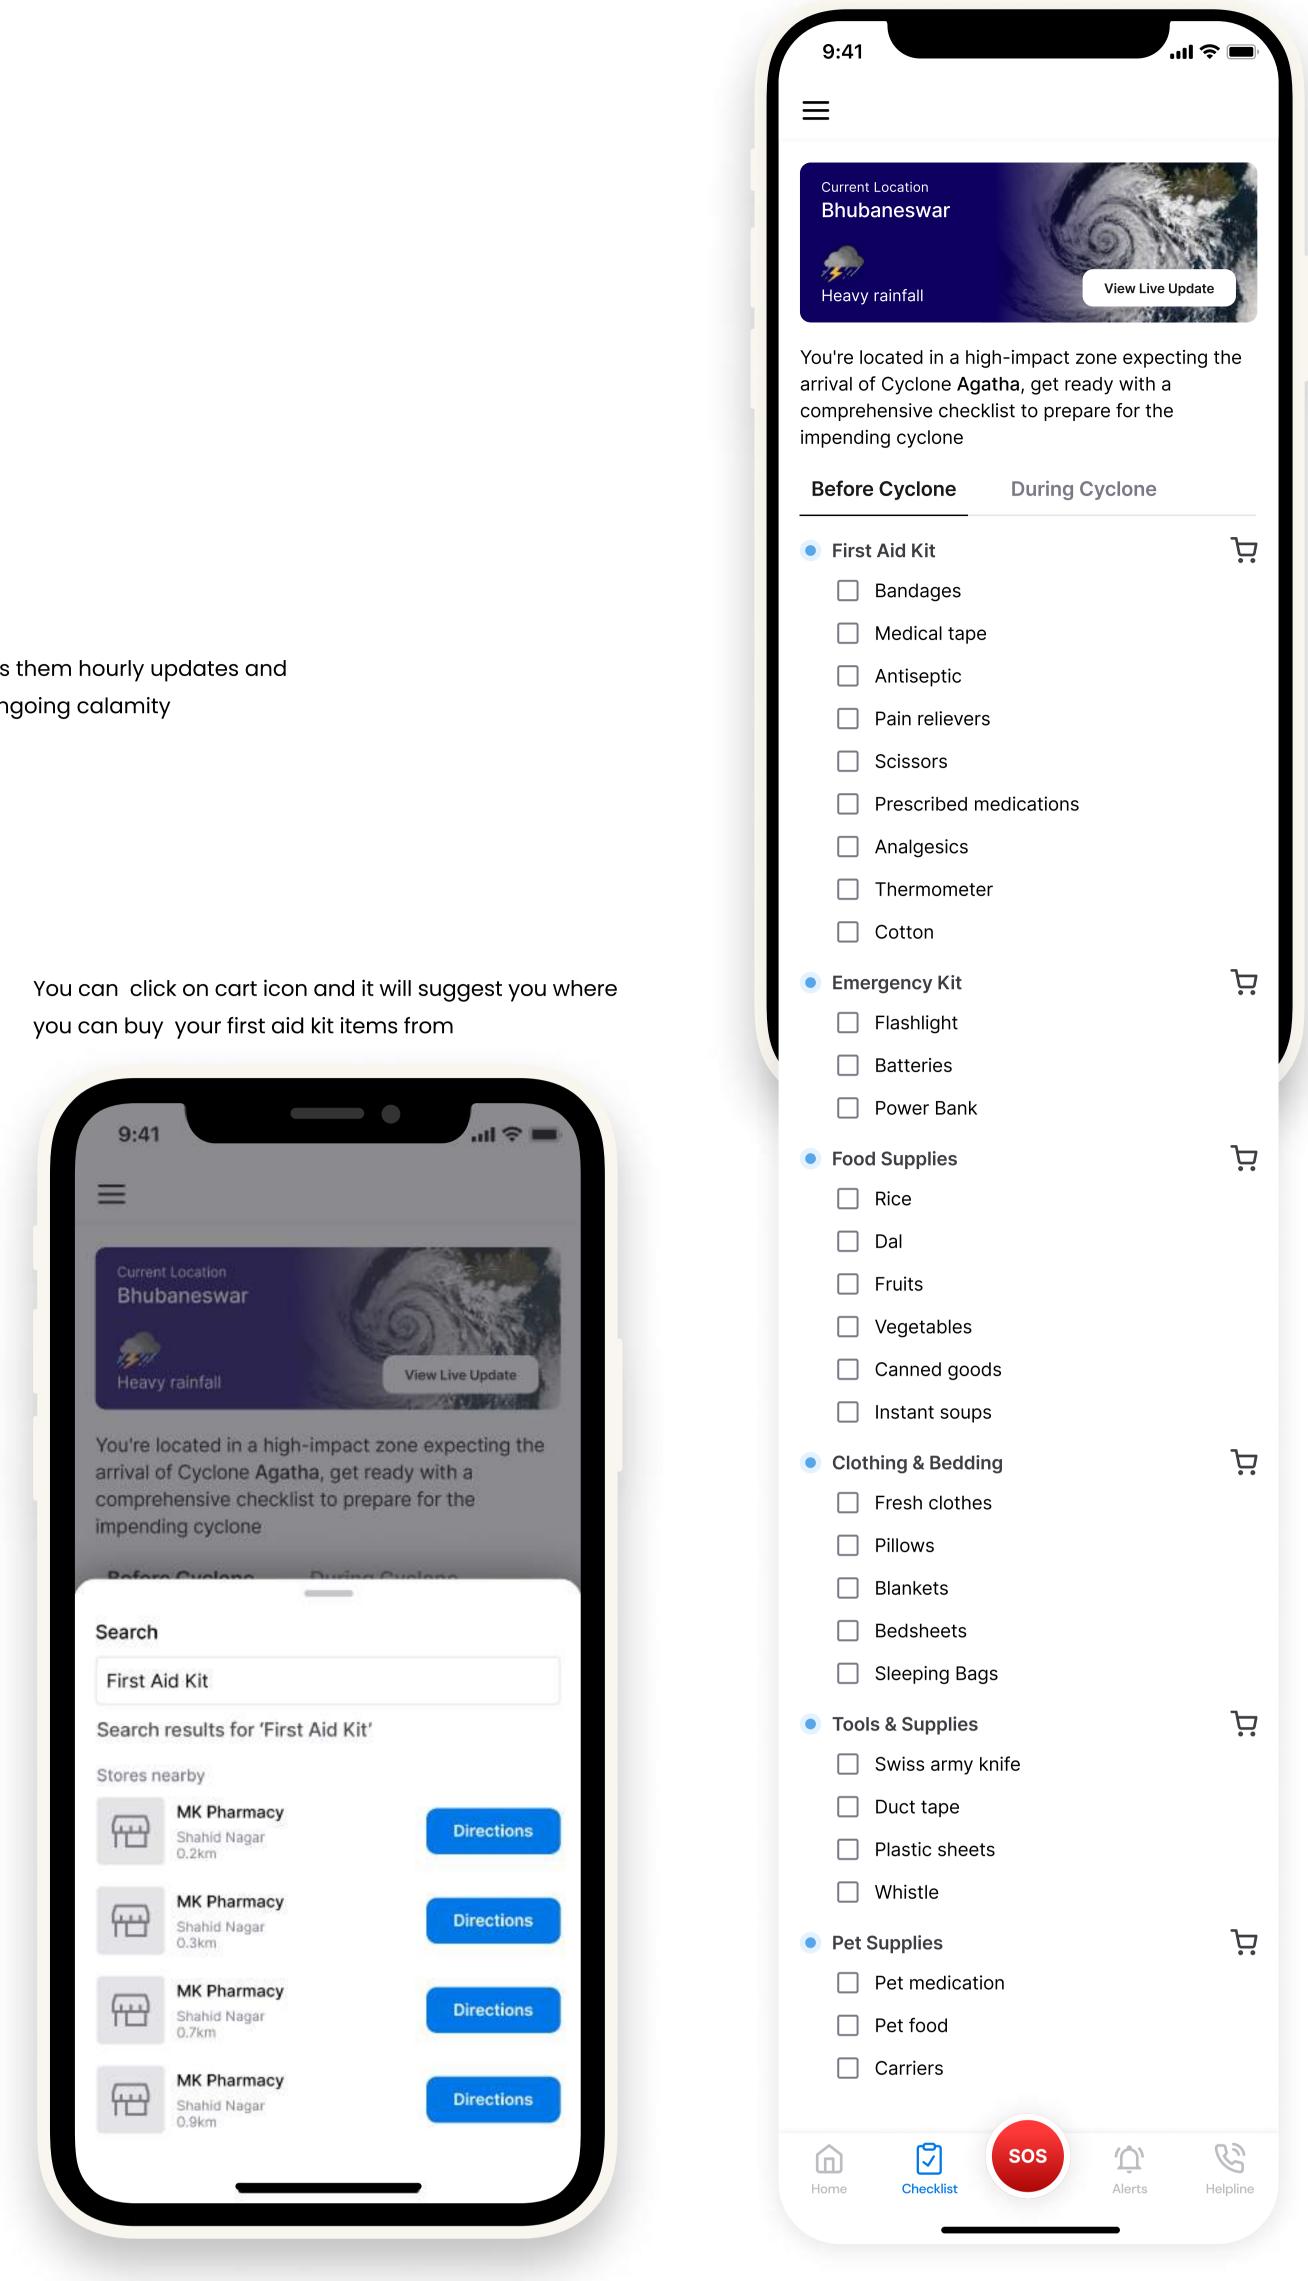

Alert notifies the user and gives them hourly updates and instruction of the upcoming/ongoing calamity

SOS feature provides user witha all tthe government affiliated emergency contact numbers

Alert notifies the user and gives them hourly updates and instruction of the upcoming/ongoing calamity

The app also allows the user to use it in the offline mode, considering calamities can disrupt network, for example routes can be saved to their database for offline use
